Web Development Project
TI402-TI402P-TI402Bdx

General Instructions:

- ⇒ The project must be completed by the same lab group.
- ⇒ The project must be developed using HTML5, CSS3, and JavaScript.
- ⇒ Frameworks and libraries are prohibited
- ⇒ Your work will be evaluated based on the quality of the final code (readability, cleanliness), the mockup, as well as during project follow-up sessions with your lab/project supervisor
- ⇒ All pages of the website must be W3C-valid.
- ⇒ Beware of plagiarism!
- ⇒ Creativity is highly valued and will be rewarded (CSS/JS animations, etc.).

Deliverables:

- ⇒ Complete source files (HTML/CSS/JS/media (images/videos/json, etc.))
- ⇒ Website mockup (wireframe, Miro, etc.).
- ⇒ Link to the Git/GitHub repository.

Learning Objectives:

To complete the project, students must apply the knowledge acquired during lectures and lab sessions, specifically:

- ⇒ Navigation on the site must be easy thanks to the hyperlinks you will add to your pages.
- ⇒ Style the content using CSS with a responsive design (including media queries and the viewport).
- ⇒ Manipulating forms and tables
- ⇒ Implement dynamic features in JavaScript to make the website interactive
- ⇒ Design a site mockup (wireframe, Miro, or other tools)

The project: what needs to be done!

The project involves creating a showcase website for EFREI's Computer Science Department, which must include:

- A home page that gives visitors an overview of the site and allows them to navigate to other pages, including
- An "About" page, which will list the names of the student project members along with a brief description of the work completed by each member, and any other information you deem relevant.
- Main content, consisting of various sections and/or articles on the subject, spans several pages.

All pages must include:

- A page header containing:
  - The site title
  - The navigation bar to the main pages
- A footer containing a navigation bar with a link to the "About" page.

Grading:

The final grade for the project will be calculated using the formula below:

25% Progress Reports + 25% Mockup + 50% Implementation + Bonus/Penalty

And here are the details of the 3 grades:

In-class assessment rubric (progress)

Travail en groupe (4 points)	HTML (4 points)	CSS (4 points)	JS (4 points)

Project Evaluation Rubric

Fonctionnalités (12 pts)					Apparence et utilisabilité : 8 points			Bonus/Malus (-4/+4)			
Pages accueil et a propos (2)	Header/footer (2)	4 pages de contenus (2)	Tableau et/ou Formulaire (2)	Site interactif (4)	Accessibilité Facilté Adaptabilite (2)	Qualité du code(4)	Desisgn graphique (2)	Non respet des consignes de rendu (retard de soumission et format de présentation du dossier) (-2 - 0)	Non-validité du HTML (W3C) (-1.5 - 0)	Finition (-1/1)	Ajout de fonctionnalités/utilisation de notions avancées (0 - 3)

Steps to follow:

The following steps will be **reviewed and evaluated** by your teacher during project follow-up sessions.

Step 1: Choosing the website content and design

1. Think about the design of your website (content, number of pages, etc.).
2. Before beginning the programming phase, you must prepare your website's visual style guide and design the site map (wireframe/Miro).
   Note: The site's directory structure must not exceed 2 levels.
   Level 0: home page, Level 1: main page, Level 2: subpage

Step 2: Getting Started

1. Create (at least) 4 HTML pages such as:
   a. Home, which will serve as the index page (Introduction to the EFREI Computer Science Department, carousel, etc.).
   b. Courses and training programs.
   c. Faculty.
   d. Contact/About Us.
   e. Any **other** relevant **proposals** will be encouraged and **rewarded.**
2. Implement the header and footer on all pages.
3. Include links to the CSS and JS files.

4. Add an EFREI logo to your website.
5. Add content to your web pages (forms, calendar, faculty/student area, etc.).
6. Add visual content to the pages (images, logo, etc.).
7. Implement responsive design.

Step 3: Add your personal touch!

1. Add animation and interactivity to your website using JavaScript (office hours calendar management, interactive navigation menu, form validation, etc.)
2. Use your creativity to add features to your website.

Note: Creativity is highly valued
